

Pre-requisites

- A mobile phone must have camera.
- It should have Java capability.
- A mobile phone must have GPRS service active.
- Facility of uploading extra application should be there.

Advantages

- No need to have more phone memory space to store images because images are directly stored in the web server.
- User can view images on web from any where in the world.
- User can broad cast those images.
- Easily Operable and configurable.
- Login and password remains same for mobile & computer.

Operation Steps

- Visit <http://www.mcameraapps.com> and signup as user.
- Download mReporter application and transfer it to your mobile phone using Bluetooth or GPRS.
- Install the application on your mobile phone.
- Configure username and password in settings on mobile phone.
- You can now launch the application on mobile phone to start streaming images.
- You can go to www.mcameraapps.com and watch live images.
